

**A REPORT
ON
NVIDIA PLUSEMIND AI**

Submitted by

Ms. DIVYA .M.K - 20241CSE0568

Under the guidance of,

Mr. Vishnu Shankar

Ms. Akkamahadevi

in partial fulfillment for the award of the degree

of

BACHELOR OF TECHNOLOGY

IN

**COMPUTER SCIENCE AND ENGINEERING
(COMPUTER ENGINEERING)**

AT

PRESIDENCY UNIVERSITY

BENGALURU

AUGUST 2026

PRESIDENCY UNIVERSITY

PRESIDENCY SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

CERTIFICATE

This is to certify that the report of **CSE7000 – Internship on Pulse Mind AI Systems** being submitted by **DIVYA.M.K** bearing roll number **20241CSE0568** in partial fulfillment of the requirement for the award of the degree of Bachelor of Technology in **Computer Science and Engineering** (**Computer Science and Engineering**) is a Bonafide work carried out under our supervision.

Mr. Vishnu Shankar
Assistant Professor
PSCS
Presidency University

Ms. Akkamahadevi
Assistant Professor
PSCS
Presidency University

Ms. Vidhya Rengasamy
Internship coordinator
PSCS
Presidency University

Dr. Bhuvaneshwari Patil
School level Internship coordinator
PSCS
Presidency University

Dr. Nagaraja S R
Head of the Department
PSCS
Presidency University

Dr. Duraipandian N
Dean – PSCS & PSIS
Presidency University

PRESIDENCY UNIVERSITY

PRESIDENCY SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

DECLARATION

I hereby declare that the work, which is being presented in the report entitled “Pulse Mind AI: Intelligent Clinical Healthcare & Diagnostic Intelligence Platform” in partial fulfillment for the award of Degree of Bachelor of Technology in **Computer Science and Engineering (Computer Science and Engineering)**, is a record of my own investigations carried under the guidance of **Dr. Vishnu Shankar, Assistant Professor, PSCS, Presidency University and Dr. Akkamah Devi, Assistant Professor, PSCS, Presidency University**, Presidency School of Computer Science and Engineering, Presidency University, Bengaluru.

I have not submitted the matter presented in this report anywhere for the award of any other Degree.

Name: DIVYA M.K.

Roll No.: 20241CSE0568

Signature of the Student:

INTERNSHIP COMPLETION CERTIFICATE

➤ **Add Internship/Course completion certificate issued from an organization. It must have the duration of the Internship, i.e. start and end date, Internship/RPL/Skill based course title and technology on which work is carried out.**

ACKNOWLEDGEMENTS

First of all, I indebted to the **GOD ALMIGHTY** for giving me an opportunity to excel in our efforts to complete this internship on time.

I express sincere thanks to our respected Dean **Dr. Duraipandian N**, Presidency School of Computer Science and Engineering & Presidency School of Information Science, Presidency University for getting us permission to undergo the internship.

I express heartfelt gratitude to our beloved **Dr. Nagaraja S R**, Head of the Department, Presidency School of Computer Science and Engineering, Presidency University, for rendering timely help in completing this internship successfully.

I am greatly indebted to my reviewers **Vishnu Shankar, Assistant Professor, PSCS, Presidency University and Akkamahadevi, Assistant Professor, PSCS, Presidency University** Presidency School of Computer Science and Engineering, Presidency University for their inspirational guidance, and valuable suggestions and for providing a chance to express technical capabilities in every respect for the completion of the internship work.

I would like to convey gratitude and heartfelt thanks to the Internship Coordinator **Dr. Bhuvaneshwari Patil** and Program Internship Coordinator **Ms. Vidhya Rengasamy**. I thank faculty and staff members of Presidency University for their support during my Internship. And also I thank my family and friends for the strong support and inspiration they have provided us in bringing out this internship.

Name: DIVYA. M.K

Roll No:20241CSE0568

ABSTRACT

Healthcare systems generate a large volume of patient data every day, making it challenging for healthcare professionals to efficiently analyze medical records, diagnose diseases, and provide timely treatment. The increasing demand for intelligent healthcare solutions has created opportunities to integrate Artificial Intelligence (AI), Machine Learning (ML), and data analytics into clinical workflows. This internship focused on the design and development of PulseMind AI: Intelligent Clinical Healthcare & Diagnostic Intelligence Platform, an AI-powered healthcare system developed to assist medical professionals in improving diagnostic accuracy, patient management, and clinical decision-making.

The primary objective of the project was to develop an intelligent platform capable of securely managing patient information while providing AI-assisted healthcare services. The system incorporates modules for patient registration, electronic health record management, disease prediction, symptom analysis, medical report management, appointment scheduling, and clinical data visualization. By leveraging Artificial Intelligence techniques, the platform assists healthcare professionals in identifying potential health conditions based on patient symptoms and historical medical records. This enables faster diagnosis and supports more informed treatment decisions.

The project was developed using modern web technologies and AI tools. The frontend interface was designed to provide an intuitive and user-friendly experience, while the backend efficiently handles data processing, authentication, and database management. Python was used for implementing AI functionalities, and machine learning algorithms were utilized for predictive healthcare analysis. Data visualization techniques were incorporated to present patient health trends, disease statistics, and system analytics through interactive dashboards. The platform emphasizes data security, scalability, and ease of use to ensure reliable performance in real-world healthcare environments.

Throughout the internship, practical exposure was gained in software development, Artificial Intelligence, machine learning concepts, database management, UI/UX design, system integration, and project documentation. The project followed a structured software development lifecycle, including requirement analysis, system design, implementation, testing, debugging, and deployment. Continuous evaluation and testing were performed to improve system accuracy, usability, and overall performance.

The developed platform demonstrates how Artificial Intelligence can support healthcare professionals by reducing manual effort, improving diagnostic efficiency, and enabling data-driven clinical decisions. PulseMind AI provides an integrated solution that combines intelligent prediction, secure patient data management, and interactive healthcare analytics within a single platform. The internship enhanced both technical and professional skills while providing valuable experience in applying AI technologies to solve real-world healthcare challenges.

Overall, the internship successfully achieved its objectives by delivering a functional AI-based healthcare platform capable of supporting modern clinical practices. The project highlights the growing importance of Artificial Intelligence in healthcare and demonstrates its potential to improve patient care, operational efficiency, and medical decision-making in future healthcare systems.

INTRODUCTION

Artificial Intelligence (AI) has become one of the most transformative technologies in modern healthcare, enabling intelligent diagnosis, predictive analytics, medical image interpretation, and clinical decision support. Conventional healthcare systems often rely on manual processing of patient records, laboratory reports, appointment scheduling, and disease diagnosis, which can lead to delays, increased workload for healthcare professionals, and inconsistent clinical decisions. The integration of AI with healthcare has the potential to improve efficiency, accuracy, and accessibility while reducing human errors.

As part of the Summer Internship Program on Artificial Intelligence and High-Performance Computing, conducted under the Presidency School of AI and Advanced Computing, students were introduced to advanced AI concepts, GPU computing, machine learning, deep learning, Large Language Models (LLMs), and high-performance model execution using NVIDIA H200 GPU infrastructure. The internship emphasized practical implementation through hands-on laboratories and an industry-oriented capstone project.

The capstone project developed during the internship is titled "PulseMind AI: Intelligent Clinical Healthcare and Diagnostic Intelligence Platform." PulseMind AI is an integrated healthcare platform that combines Artificial Intelligence, Machine Learning, Natural Language Processing (NLP), Explainable AI (XAI), Optical Character Recognition (OCR), and Full Stack Web Development to provide intelligent healthcare services. The platform assists doctors, patients, hospitals, and healthcare providers by automating clinical workflows and supporting evidence-based medical decisions.

The system offers multiple healthcare modules including AI-powered symptom analysis, disease risk prediction, medical report interpretation, medical image analysis, emergency triage, medication management, nutrition planning, appointment scheduling, family health analysis, disease progression simulation, and healthcare analytics. Unlike conventional

healthcare applications that provide only basic patient management, PulseMind AI integrates intelligent prediction models and real-time analytics into a unified platform, making it suitable for modern digital healthcare environments.

The application was developed using React.js, TypeScript, Tailwind CSS, FastAPI, Python, Firebase Firestore, REST APIs, Large Language Models (LLMs), OCR technologies, and Explainable AI techniques, resulting in a scalable, secure, and user-friendly healthcare solution.

The internship provided valuable exposure to software engineering practices, AI model integration, cloud-based application development, database management, API development, project documentation, testing, and deployment. It also enhanced practical problem-solving abilities by enabling the implementation of an industry-level AI healthcare platform that addresses real-world healthcare challenges.

OBJECTIVES

- To design and implement an AI-powered healthcare platform for intelligent clinical assistance.
- To develop a secure patient management system capable of storing and managing electronic health records.
- To predict disease risks using Artificial Intelligence and Machine Learning techniques.
- To automate medical report analysis using Optical Character Recognition (OCR) and Natural Language Processing.
- To implement AI-assisted medical image analysis for supporting diagnostic decisions.
- To provide emergency triage and first-aid recommendations based on patient symptoms.
- To simulate disease progression under different treatment scenarios for better clinical understanding.
- To manage appointments, medications, nutrition plans, and family medical histories through a unified healthcare platform.

- To generate healthcare analytics and interactive dashboards for monitoring patient health.
- To gain practical knowledge in AI, Full Stack Development, REST API development, cloud databases, and software engineering through an industry-oriented internship.

WORK PROGRESS

Phase 1: Requirement Analysis

The first phase involved studying existing healthcare systems and identifying major challenges faced by hospitals and healthcare providers. Requirements were gathered for intelligent patient management, AI-based disease prediction, emergency response, medical report analysis, and healthcare analytics.

Phase 2: System Design

The overall architecture of PulseMind AI was designed by separating the application into frontend, backend, AI modules, and database components. A modular architecture was adopted to ensure scalability and maintainability. User interfaces were designed to provide an intuitive experience for patients and healthcare professionals.

Phase 3: Frontend Development

The user interface was developed using **React.js, TypeScript, Tailwind CSS, HTML5, CSS3, JavaScript, and Vite**. Multiple healthcare modules were created, including:

- Dashboard
- AI Clinical Assistant
- Disease Progression Simulator
- Medical Imaging Module
- Emergency Triage
- Medication Management
- Nutrition Planner
- Appointment Scheduler
- Research Agent

- Family Health Analysis

Phase 4: Backend Development

The backend was implemented using **FastAPI (Python)** and RESTful APIs.

The backend handled:

- User authentication
- AI request processing
- Patient record management
- Medical report analysis
- Prediction models
- API communication
- File upload management

Phase 5: Artificial Intelligence Integration

Several AI technologies were integrated into the platform, including:

- Large Language Models (LLMs)
- Natural Language Processing (NLP)
- Optical Character Recognition (OCR)
- Disease Risk Prediction
- Explainable AI (XAI)
- Clinical Decision Support

Phase 6: Database Management

Firebase Firestore was used as the primary cloud database, with JSON local storage as a backup mechanism. The database stores patient profiles, medical reports, medication schedules, appointments, AI prediction history, and healthcare analytics.

Phase 7: Testing and Validation

Extensive testing was carried out throughout development, including:

- Functional Testing
- User Interface Testing
- API Testing
- AI Prediction Validation
- Performance Testing
- Error Handling
- Cross-browser Compatibility Testing

RESULTS

The internship successfully resulted in the development of **PulseMind AI**, an intelligent healthcare platform capable of integrating multiple AI services into a single application.

The developed system provides:

- AI-based disease risk prediction
- Intelligent clinical decision support
- Medical report analysis using OCR
- AI-powered medical image interpretation
- Emergency triage assistance
- Medication and appointment management
- Nutrition planning
- Disease progression simulation
- Family health analytics
- Interactive healthcare dashboards

The application demonstrated that AI technologies can significantly improve healthcare delivery by reducing manual effort, supporting healthcare professionals with intelligent recommendations, and providing patients with timely healthcare information.

The platform successfully combines Artificial Intelligence, Machine Learning, Explainable AI, and Full Stack Web Development into a practical healthcare solution that is scalable, secure, and user-friendly. The internship objectives were successfully achieved through the implementation of all major healthcare modules.

CONCLUSION

The internship provided valuable practical exposure to Artificial Intelligence, High-Performance Computing, and Full Stack Software Development. The development of PulseMind AI demonstrated how modern AI technologies can be effectively integrated into healthcare systems to improve clinical decision-making, patient management, and diagnostic intelligence.

Throughout the internship, practical skills were acquired in React.js, FastAPI, Python, Firebase, REST APIs, Artificial Intelligence, Machine Learning, Explainable AI, OCR, and software engineering methodologies. The project also strengthened technical competencies in system design, API integration, testing, debugging, documentation, and deployment.

PulseMind AI successfully integrates intelligent disease prediction, clinical assistance, medical report analysis, emergency response, appointment management, and healthcare analytics into a unified platform. The project establishes a strong foundation for future enhancements such as Electronic Health Record (EHR) integration, IoT-enabled health monitoring, wearable device connectivity, telemedicine services, cloud-based AI deployment, and predictive healthcare analytics.

Overall, the internship successfully fulfilled its learning objectives and demonstrated the practical application of Artificial Intelligence in solving real-world healthcare challenges.
